

GAME RULES

- This page contains information on how to play this game.
- Please scroll down to read through all topics.

Getting started

- This game is a game for one player - the gameplay of other players does not affect yours. Each game starts when you place a bet and ends when you leave the application.

Playing

- You choose the total bet per round via the "Total Bet" button.
- The minimum bet per round is \$ 0.10.
- The maximum bet per round is \$ 20 000.00.
- The "Start" button begins a round of play.
- Each round is independent of previous rounds.
- All game outcomes are independent and randomly determined.
- When you start a round, the bet is deducted from the balance you've paid in.
- At the end of a round, the console displays your win, if any.

Win Lines

- The game has 5 reels and 3 rows with 10 win lines (based on the first 10 win lines shown on the Paytable & Info pages), except during the Extended Reels Feature, where the number of rows can expand up to 6 and the win lines can increase to 25, depending on the level. In the Both Ways Pay Feature and its combination, twice the amount of win lines are present, since they are mirrored.
- You can find an overview of the win line pattern via "Paytable & Info".

Autoplay

- Clicking on "Auto" starts automatic spins.
- If "Autoplay" is activated the button label becomes green. Clicking it again stops the automatic spins.
- Autoplay stops automatically when the total bet is higher than your current funds.
- Autoplay stops automatically when a feature is awarded.

Winnings

- Winning combinations and payouts are made according to the payable.
- Symbol payout values shown in the payable are dynamic and change in accordance with the selected bet value.
- All wins start on the leftmost reel or the rightmost reel and are for combinations of a kind, consecutive from left to right or right to left on selected lines, except scatters.
- Win lines from right to left are only unlocked when playing the Both Ways Pays Feature, and any feature combination including it.
- Highest win only paid on each selected line and per scatter combination.
- Scatter wins and line wins are added.
- The leftmost reel is reel 1, the rightmost reel is reel 5.

Bonus Symbols

- The Blue, Red and Green Coin symbols are Scatter symbols, which can trigger the respective Pot with the corresponding feature.
- Multiple coins landing simultaneously can trigger a combined feature, in which case the mechanics and levels of the corresponding features are combined.

- Landing a Coin does not guarantee a feature will be triggered. The Coin can do nothing, add coins to the Pot, level up the Pot Indicator, trigger a feature or level up the Pot Indicator together with triggering a feature (Wukong Blessing).
- The pots visually increasing in size is no indication of an increased feature trigger chance. The features are triggered randomly whenever a corresponding Coin lands, no matter the size of the pots.
- The Coin symbol is presented only in the base game.
- The Wild symbol substitutes for all symbols except Scatters.

RTP Range

- The theoretical RTP (return to player) value for this game is 95.00 %.
- The theoretical RTP is calculated as total win/total bet over a large number of games played and reflects the prizes awarded by a game as a percentage of all bets made. The actual RTP can vary widely in either direction for a small number of games due to statistical variance.

Connection Loss

- In case you lose your network connection, the game will proceed to complete the current round of play automatically after a delay of 2 hours absence from the game.
- If you reconnect into the game earlier, you are able to continue playing the current round.
- This includes all settings such as number of lines and bet.
- If this round contains multiple spins (e.g. free games feature), the game will determine your winnings based on the game's expected win values.

Malfunction voids all pays and plays.
